
WHAT SEPARATES US?

Technology

Dental Implants

- We have specialists and generalists all under one roof. We do all your work right here. Dr. Sheldon, a nationally-known periodontist, does all the diagnostic work and treatment planning, Dr. Furtado, a Board-Certified periodontist, does dental implant and periodontal treatment. Dr. Matt Sheldon, with an Advanced Education in General Dentistry certificate, does the cosmetic and restorative work. You have 3 top doctors working together for you.
- We were the first in Central Florida to use CT-Scan generated surgical guides for less invasive surgery.
- We can extract the teeth and fix in new implant supported teeth all in one day.
- We use PRGF (Plasma Rich in Growth Factors) from your own blood in nearly every surgical procedure to speed healing.
- We can place implants for single tooth replacement, multiple tooth replacement, snaps to support dentures, or complete fixed-in teeth.
- We offer non-metallic, zirconia implants for those who wish “metal-free” restorations.
- Our fixed-in Solid Bite full arch tooth replacement is constructed of all-ceramic material. There is no acrylic. This assures a beautiful and long-lasting restoration.
- We offer a lifetime warranty on all our implants. We use the best technology and a well-trained team of doctors to place all of our implants with confidence that they will last you a lifetime.

CT Scan

- Allows visualization of tooth relationship to bone.
- Helps “find” bone support not seen in conventional x-rays.
- Reduces the need for bone grafting and sinus lifts.
- Reduces treatment time.
- Reduces surgical trauma.
- Radiation is 2% of similar medical CT scan.

In Vivo Software

- Allows for virtual surgery to be done on the computer before we do it in your mouth.

Perioscope (Periodontal Endoscope)

- The only instrument that allows visualization of your pocket below the gum line.
- Almost totally eliminates the need for gum surgery for periodontal disease.
- One of only 100 offices in the U.S. having such an instrument.
- Both of our hygienists are highly trained to use this endoscopic camera.

Digital X-rays

- Enlarged view of the problem.
- Reduces radiation.

Osstell (Implant Stability Meter)

- Provides objective data on attachment of implant to bone.
- Allows for earlier implant restoration.
- Helps prevent premature implant loading and therefore better assures long-term success of your implants

PRGF (Plasma Rich in Growth Factors)

- Uses the patient's platelets to provide growth factors, speeding healing to the site.
- Requires minimal blood.
- All handling is done on premises.
- We have two phlebotomists on staff.

Dr. Sheldon

- Periodontist with over 36 years of continued service at the same location in Brevard County.
- Has been placing dental implants for over 30 years.
- Associate Clinical Professor at the University of Florida in the Department of Periodontology.
- Regular guest on "Focus for Seniors" on television and radio programs.
- Referred to by well over 100 dentists for dental implant and periodontal therapy.
- Intravenous sedation is available. We have a medical anesthesiologist available for patients who need deeper sedation.
- Many of our patients are referred by doctors and happy/satisfied patients just like you.
